Maikel Ferrer

Full Stack Developer · Web, APIs, Automation & AI

I build web apps and systems that run on their own: they take payments, deliver and notify. Stores with payment gateways and automatic delivery, Node.js and PostgreSQL backends, n8n workflows and LLM features such as RAG assistants. Final-year Cybersecurity Engineering student, which shows in how I build: server-side validation, rate limiting and never trusting the browser.

// EXPERIENCE

Freelance Full Stack Developer

2024 — present

Self-employed · remote

End-to-end projects for clients, from requirements to production deployment: stores with payment gateways, APIs with automatic delivery, admin panels, automations and AI features. I own each project from start to finish and hand over documented, deployed code.

// PROJECTS

Cobble Quest · Website & store

2026 · in production

Cobblemon (Minecraft) server

- Website and store with catalog, cart and PayPal or card checkout; ranks, admin panel and live online players.
- Pokémon wiki generated from the official Cobblemon repository.

React 19 · TypeScript · Vite · Tailwind · PayPal JS SDK · Cloudflare Pages

store.wrquest.xyz · code

Cobble Quest · Automatic delivery API

2026

- Captures the payment, decides server-side which commands to run without trusting the browser, and runs them on every server in the network through the Pelican panel.
- Players get what they bought instantly (LuckPerms ranks and items) with no manual work from staff.
- JWT auth, rate limiting, Helmet with CSP, per-domain CORS and a command allowlist.

Node.js · Express 5 · TypeScript · Supabase (PostgreSQL) · PayPal · Stripe · Pelican API · Render

code

// WHAT I DO

Web apps and stores with payments, deployment and security from day one.

APIs and integrations with payment gateways and third-party services.

Automation and AI: n8n workflows, Telegram bots, LLM features and RAG.

// STACK

Frontend

React · TypeScript · Vite · Tailwind · React Native · Expo

Backend

Node.js · Express · Python · Django REST · JWT

Data

PostgreSQL · Supabase · pgvector

AI

RAG · Embeddings · LLM APIs · Prompt design

Payments & integrations

PayPal · Stripe · Pelican API · Telegram API

Automation & infra

n8n · Docker · Cloudflare · Render · GitHub Actions · Linux

// MORE PROJECTS

AI customer support (RAG)

2026

- Assistant that answers customers using only the business's own documents: chunking, embeddings and similarity search with pgvector, short per-session memory.
- Hands the conversation to a human (Telegram alert) when it doesn't know or the customer asks. Two versions: Supabase Edge Functions and n8n.

Supabase · PostgreSQL + pgvector · Edge Functions (Deno) · n8n · OpenRouter LLMs · Telegram

code

Business automations with n8n

2026

- **Document reader:** upload a contract, invoice or report (PDF, DOCX, TXT) and get a summary with key dates, amounts, risks and questions to ask; long documents are processed in parts.
- **Excel analyzer:** send a spreadsheet to a Telegram bot and get every sheet, column and formula explained, cross-sheet dependencies and errors detected, plus an HTML report. Numbers are computed in code; the LLM only writes the explanation.
- **Lead capture, returns and low-stock inventory** flows; an error watchdog that retries network failures and a monitor that resumes work after an outage.

n8n · Docker · PostgreSQL · IMAP · SMTP · Telegram · OpenRouter · n8n REST API

github.com/Maikell95/n8n_automations

MiDex · Competitive Pokédex

Mobile app

Competitive Pokédex in Spanish: damage calculator on Smogon's official engine, team builder, speed tiers and usage stats per tier. Works offline and updates itself daily.

Expo · React Native · TypeScript · @smogon/calc

code

Websites for Minecraft servers

2026 · prototypes

Themed websites built on the server's real Tebex catalog: rank comparison, events with countdowns and live data (online players, Discord members). Local payment flows such as Mercado Pago and prices in local currency at the daily rate.

HTML · CSS · JavaScript · Tebex · mcstatus · Discord API

Academic management panel

UCI

Admin panel for graduation by publications: publications, users and review states, with committee approval workflows.

React · TypeScript · Vite · Django · Django REST Framework · PostgreSQL

// SECURITY

Server-side validation and pricing

Rate limiting · Helmet CSP · CORS

Command injection protection

// EDUCATION

Cybersecurity Engineering
University of Informatics Sciences (UCI), Havana
2022 — 2026 · final year

// LANGUAGES

Spanish · native

English · B1+ (working proficiency)

// HOW I WORK

Tested before delivery, including test purchases when payments are involved

Code on GitHub, documented

Async-friendly: email, Telegram or Discord
